UNIDO and Climate Innovation

UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

A2D Accelerate to Demonstrate Facility

United Nations Industrial Development Organization (UNIDO)

- UNIDO is the UN Agency for the promotion of inclusive and sustainable industrial development in developing countries.
- UNIDO focuses on three main priorities:

Supporting sustainable supply chains so that developing country producers get a fair deal and scarce resources are preserved.

Limiting climate breakdown by using renewable energy and energy efficiency to reduce industrial greenhouse gas emissions.

Ending hunger by cutting post-harvest losses and developing agribusiness value chains.

UNIDO's expertise:

- Technical assistance and capacity building
- Investment and innovation funding
- Partnerships and collaboration
- Policy dialogues

UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

A2D Accelerate to Demonstrate Facility

Climate Innovation

- Adopt **systems innovation** approach to sustainable and inclusive industrial development, and to address climate change.
- Drive innovation across **key levers of change** (technologies, policies, financing, regulations, society and integrated solutions for climate mitigation and/or adaptation, nature, ozone protection, land and all sectors).

- UNIDO provides **support and expertise across the innovation chain** (earlier-stage to later-stage).

Areas-of-Focus:

- Support governments to **create ecosystems** (set policies, regulations and institutional capacity) to meet international obligations and create market for integrated climate solutions.

- **Enable industry** (start-ups, SMES, corporates and project developers) to drive innovation in the emergence, demonstration and large-scale adoption of integrated climate solutions.

- **Unlock the role of the private sector** in the transition to low-carbon and climate resilient development pathways.

A2D Accelerate to Demonstrate Facility

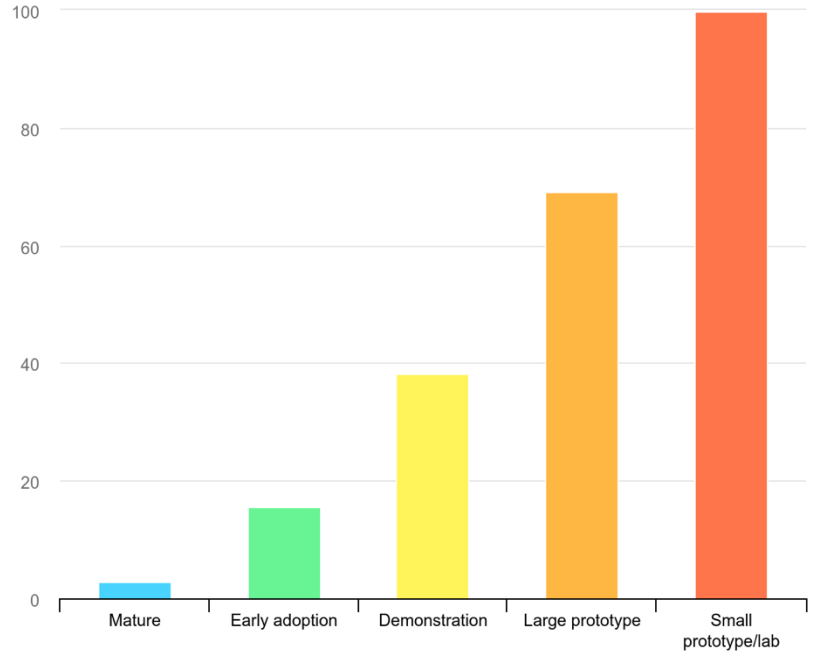
Deep Dive: Importance of Demonstration Projects

- Accelerating clean energy innovation is increasingly recognized as vital in global efforts to **combat climate change and to meet the Sustainable Development Goals** (SDGs).
- The International Energy Agency (IEA) highlights that almost 35% of the emissions reductions necessary for achieving a global **net-zero scenario by 2050 will come from technologies that are still in the demonstration** or prototype phase.
- Alongside the important need for leveraging private sector finance, at least USD 90 billion in public funding is needed globally by 2026 for clean energy demonstration projects to be commercially ready by 2030.
- The A2D Facility contributes to filling this important gap in support to developing countries by **targeting the demonstration phase of the innovation chain**, bridging earlier-stage and commercial-scale projects.

Relative increase in carbon dioxide emissions savings in 2050 by current technology maturity category:



Energy Technology Perspectives 2020. IEA, 2020.

UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

A2D Accelerate to Demonstrate Facility

Overview of A2D Facility

The Solution

The A2D Facility aims to accelerate the commercialization of innovative clean energy solutions in developing countries by supporting catalytic and scalable demonstration projects in:

- **Clean hydrogen**
- **Critical minerals**
- **Smart energy**
- **Industrial decarbonization**

Initial Funding and Timescales

- **Initial contribution of ~USD 80 million** from the UK Government
- Initially operates from **April 2023 to March 2029**
- Projects supported through **calls-for-proposals** (first call in July 2024)
- Global (**developing country-focused**) programme
- **Grants of USD 1-5 million** per project.
- Main Sustainable Development Goals (**SDGs**)-of-focus:

Activities bringing **transformational solutions** to the market at scale.

- **Providing grant support** for transformational demonstration projects with strong scalability potential.
- Creating and **disseminating knowledge and experiences** to foster collaboration, learning and scalability.

UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

A2D Accelerate to Demonstrate Facility

Thematic area: Critical Minerals

➢ **Challenge:**

- Critical minerals, vital for the clean energy transition across different sectors, such as industry, transport, power and buildings, face limited supply and availability concerns, and escalating demand.

➢ **Solution (A2D Facility's focus):**

- Supporting demonstration projects of innovative and transformational solutions to decarbonize re-fining, processing, recycling and re-use of critical minerals (exploration and extraction are out-of-scope).

Market Assessment on Accelerating Innovation in Critical Minerals

Programmes, Projects and Initiatives:

- A2D Facility
- Global Alliance and Partnership for Responsible and Green Minerals
- UN Framework on Just Transitions for Critical Energy Transition Minerals
- Artisanal Small-scale Gold Mining
- Global Electronics Management (GEM) Programme

UNIDO's expertise in Critical Minerals

UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

A2D Accelerate to Demonstrate Facility

Thematic area: Clean Hydrogen

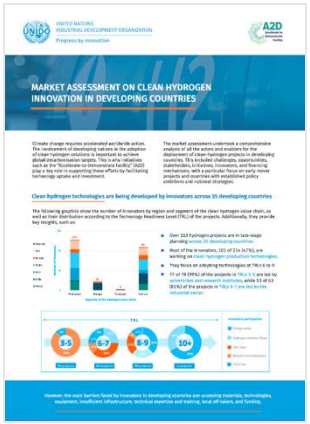
➢ **Challenge:**

Whilst an increasing number of countries are developing clean hydrogen strategies and projects, the urgency to tackle emissions necessitates a diffusion of support and capabilities, especially countries with abundant low-cost clean resources.

➢ **Solution (A2D Facility's focus):**

Supporting demonstration projects of innovative and transformational solutions to decarbonize across the clean hydrogen value chain across different sectors, such as industry, power, buildings and transport.

Market Assessment on Accelerating Innovation in Clean Hydrogen



Programmes, Projects and Initiatives:

- A2D Facility
- Global Programme for Hydrogen in Industry
- GEF-8 Global Clean Hydrogen Programme (GCHP)
- Net Zero Partnership

The focus areas for UNIDO's interventions are:

- Policies
- Standards
- Financial instruments
- Skills and knowledge
- Innovation
- Coordination & convening

UNIDO's expertise in Clean Hydrogen

UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

Thematic area: Smart Energy

➢ **Challenge:**

Industries in developing countries, such as manufacturing, power, transport and buildings, often face inefficiencies in energy use, emissions and access.

➢ **Solution (A2D Facility's focus):**

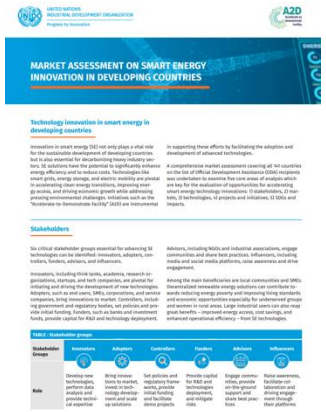
Supporting demonstration projects of smart energy technologies, such as machine learning, blockchain, digital twins, Artificial Intelligence (AI) and smart grid-enabling solutions, to optimize and digitalize energy management across different sectors, such as transport, industry, power and buildings.

Programme, Projects and Initiatives:

- A2D Facility
- Global Alliance on AI for Industry and Manufacturing
- UNIDO 4IR Strategic Framework to accelerate the attainment of inclusive and sustainable industrial development by 2030

UNIDO's expertise in Smart Energy

Market Assessment on Accelerating Innovation in Critical Minerals



UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

A2D Accelerate to Demonstrate Facility

Thematic area: Industrial Decarbonization

➢ **Challenge:**

Forecasted growth in industrial emissions in developing countries due to rapid urbanization and an increase in middle-class consumers, poses a challenge for global efforts to combat climate change.

➢ **Solution (A2D Facility's focus):**

Supporting demonstration projects of innovative and transformational solutions in different industries in developing countries, such as manufacturing, processing and energy-intensive industries.

Programmes, Projects and Initiatives:

- A2D Facility
- Industrial Deep Decarbonisation Initiative (IDDI)
- Net Zero Partnership
- Circular Economy programme
- Persistent organic pollutants (POPs) management

UNIDO's expertise in Industrial Decarbonization

Market Assessment on Accelerating Innovation in Industrial Decarbonization

MARKET ASSESSMENT ON INDUSTRIAL DECARBONIZATION INNOVATION IN DEVELOPING COUNTRIES

A2D Accelerate to Demonstrate Facility

A2D Facility Year 1 and 2 Key Milestones

COP27 SHARM EL-SHEIKH EGYPT 2022

Initial announcement

7 November 2022

Initial announcement of the new clean energy innovation facility at COP 27.

Official launch

15 May 2023

Official launch of the A2D Facility by UNIDO's DG and UK Ambassador.

Participation in Asia Clean Energy Forum

3 - 6 June 2024

Organization of three events at the Asia Clean Energy Forum.

Call-for-Proposals annuncement event

18 July 2024

Announcement event to launch the first Call-for-Proposals, led by UNIDO Director General Gerd Müller. Launch of the A2D Facility Year 1 Annual Report and A2D Facility website.

Launch of Market Assessments at COP29

14 - 16 November 2024

Launch of 3 market assessments on Critical Minerals, Clean Hydrogen, and Smart Energy & Industrial Decarbonization at COP29.

First demonstration projects begin

January 2025

Selection of the first five supported demonstration projects, with at least one project per thematic area.

Completion of GESI-ESS project

31 March 2025

GESI-ESS Action Plans developed.

Clean Hydrogen: Ammonium Sulfate Fertilizers from Renewable Hydrogen in Namibia

Objectives

- Produce green fertilizers, hydrogen, and ammonia to support carbon-free agriculture and reduce greenhouse gas emissions.
- Enhance local agriculture by improving fertilizer availability, affordability, and increasing productivity for farmers.
- Empower communities through job creation and capacity building in clean technology.

Transformational Project

- At the core is the **use of green hydrogen, generated via electrolysis powered by solar energy**. This clean hydrogen is used to synthesize ammonia, a key component of ammonium sulfate fertilizer.
- By replacing traditional fossil fuel-based production processes with green hydrogen, the project significantly reduces greenhouse gas emissions, improves energy efficiency, and promotes circular economy principles.
    - *Example of how clean energy can transform agriculture.*

UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

Clean Hydrogen: Ammonium Sulfate Fertilizers from Renewable Hydrogen in Namibia

Expected Impacts

- **Environmental:**
  - Produces fertilizers using **renewable green hydrogen**, reducing greenhouse gas emissions.
  - Decreases dependence on **carbon-intensive fertilizer imports**, supporting sustainability.
  - Promotes **cleaner agriculture**, improving soil health and boosting biodiversity.
- **Social:**
  - **Involves local communities** with opportunities for ownership and direct benefits.
  - Improves **food security** and strengthens **local livelihoods** through better farming practices.
- **Economic:**
  - **Creates jobs** in construction, operations, and agriculture, boosting the local economy.
  - Lowers **fertilizer costs** for farmers, reducing the need for imports.
  - Stimulates growth in the **agricultural sector**, improving **economic resilience** in Namibia and meeting both local and international fertilizer demand.

UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

Industrial Decarbonization: "Green" Tea: Clean Heat and Power with Biomass Residues in Kenya

Objectives

- Operate a 500kW **gasifier using waste biomass to reduce emissions from tea production** by 30% and demonstrate reliable, cost-effective performance.
- Create 50 new jobs in biomass management, gasifier operation, and monitoring, with **a focus on women and youth, while linking energy use to climate and community results**.
- Develop a governance framework for environmental and social safeguards and create a **pipeline for scaling the project to more tea factories** and other industries.

Transformational Project

- The MicroHub gasifier converts local biomass into power and heat, **reducing fuel wood use and enabling tea factories to use 20% energy from prunings**, crop residues, and bamboo.
- Produces biochar (10-15%) to **improve soil fertility, increase tea yields, and sequester carbon**, promoting long-term environmental benefits.
- Supports green jobs, empowers women in energy, and promotes circular economy principles while strengthening value chains and sustainable land management.

Industrial Decarbonization: "Green" Tea: Clean Heat and Power with Biomass Residues in Kenya

Expected Impacts

- **Environmental:**
  - **Improved soil health** enhances water quality, reduces erosion, and contributes to a more resilient local water cycle.
  - **Cleaner energy** from gasification replaces fuelwood, expanding biodiverse tree cover and restoring native forests, aiding carbon sequestration.
- **Economic:**
  - **Energy neutrality** through gasification reduces reliance on fossil fuels, lowers energy and fertilizer costs, improving factory margins and reducing vulnerability to price fluctuations.
- **Social:**
  - **Job creation and empowerment**: Supports green jobs and empowers local communities, particularly women, while fostering sustainable land management and improving livelihoods.

Critical Minerals: Lithium-Ion Transport Solutions in Tanzania

Objective

To accelerate the commercialization of innovative clean energy technology in transportation sector using **locally manufactured** Electric Charged Lithium-Ion Batteries in Tanzania.

Transformational Project

The project's business model is based on three main pillars:

- **Local Lithium Battery Manufacturing:** Reducing reliance on expensive imports by producing cost-effective, high-quality lithium batteries within Tanzania.
- **Chassis Production and Assembly:** Producing durable, locally assembled chassis for electric two- and three-wheelers suited to the country's unique road conditions.
- **Charging and Battery Swapping Infrastructure:** Establishing a network of clean, affordable, and accessible fast charging and battery swapping stations to serve both urban and rural populations.

Critical Minerals: Lithium-Ion Transport Solutions in Tanzania

Expected Impacts

- **Environmental Impacts:**
  - 50,000 electric motorcycles produced each year
  - Reduces 65,000 tons of fossil fuel use annually
  - Lower CO_2 emissions from each bike, helping fight climate change
- **Social Impacts:**
  - 50% savings on fuel costs compared to gas-powered bikes
  - Less maintenance needed, so more time on the road
  - More charging stations and battery swap stations to keep bikes running smoothly
  - Creates jobs for both skilled and unskilled workers, especially for young people in Tanzania
- **Economic Impacts:**
  - Increased government revenue through taxes
  - Saves money by using fewer imported fuels and motorcycles
  - Lower transport costs and improved logistics

UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

Smart Energy: Grid Resilience through Intelligent PV and Storage in Nepal

Objectives

- The project will scale up from 100 kW to 2 MW, demonstrating the potential of smart solar storage microgrids to replace diesel generators and coal-based electricity in the industrial sector, supporting Nepal's clean energy goals.
- It will provide a concrete demonstration of the cost-effectiveness and reliability of smart solar and storage systems, paving the way for larger-scale deployments in Nepal and beyond.

Transformational Project

- Deployment of Nepal's largest battery-based microgrid (2 MW / 4 MWh battery, 1 MWp solar PV) at Laxmi Steel Factory, providing 100% generator-free backup for critical systems.
- The Microgrid Management System (MMS) will optimize battery and solar performance, ensuring reliable power without diesel and preparing the site for future grid services.
- Showcasing the viability of smart solar storage microgrids, setting the stage for wider adoption in Nepal and South Asia's industrial sectors.

Smart Energy: Grid Resilience through Intelligent PV and Storage in Nepal

Expected Impacts

- **Environmental:**
  - The microgrid will cut industrial emissions by displacing diesel, reducing CO_2, and improving local air quality.
- **Social:**
  - The provision of clean, stable energy improves workplace safety and community health. Solar training and safety protocols support workforce development and career advancement.
- **Economic:**
  - Clean energy lowers operational costs and stabilises energy supply. The ESS plan supports sustainability through risk mitigation, monitoring, and CSR activities such as biodiversity conservation, waste management, and community engagement.
- **Inclusion:**
  - The GESI plan supports inclusive employment by assessing workforce dynamics and establishing a policy framework. A dedicated steering committee will oversee implementation, track KPIs, and ensure active community participation – especially for women and marginalised groups.

UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

Smart Energy: Smart Grid Scale-Up in Nigeria

Objectives

- The project will distribute power from an anchor site to up to 20 consumers, electrifying 10,000 to 40,000 homes and businesses, especially in underserved rural and urban areas.
- It will reduce diesel consumption and carbon emissions while improving energy access and supporting livelihoods, with a focus on marginalized women and children.
- The model transforms solar PV owners into prosumers, encouraging clean energy investment, while data collected will help inform policy and infrastructure planning for scalable electrification.

Transformational Project

- Deployment of smart distribution hardware, low-loss AC grids, and energy trading software to automate energy distribution and enable remote monitoring and control.
- The system allows independent solar PV owners to trade energy with their communities, reducing payback time and attracting private investment in solar energy.
- Electrification of up to 40,000 households and businesses, using machine learning for generation and demand prediction, to democratize power generation and drive mass electrification in Africa.

Smart Energy: Smart Grid Scale-Up in Nigeria

Expected Impacts

- **Environmental:**
  - Diesel generators will be replaced, and emissions reduced, by scaling solar PV utilization. This is especially important as Nigeria's population is projected to reach 500 million by the end of the century, driving energy demand that must be met sustainably.
- **Social:**
  - Small businesses, many of them run by women, face challenges in accessing reliable energy. Clean energy alternatives will empower these communities. In addition, improved electricity access supports access to information and education.
- **Economic:**
  - Replacing costly diesel with solar energy will lead to direct cost savings and reduce energy expenses for underserved communities.
- **Technological:**
  - The deployment of new technologies will contribute to continued innovation in Africa's energy landscape.

Questions & Answers

UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

A2D
Accelerate to Demonstrate Facility

Designing and Implementing Demonstration Projects: Monitoring, Reporting and Dissemination

UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

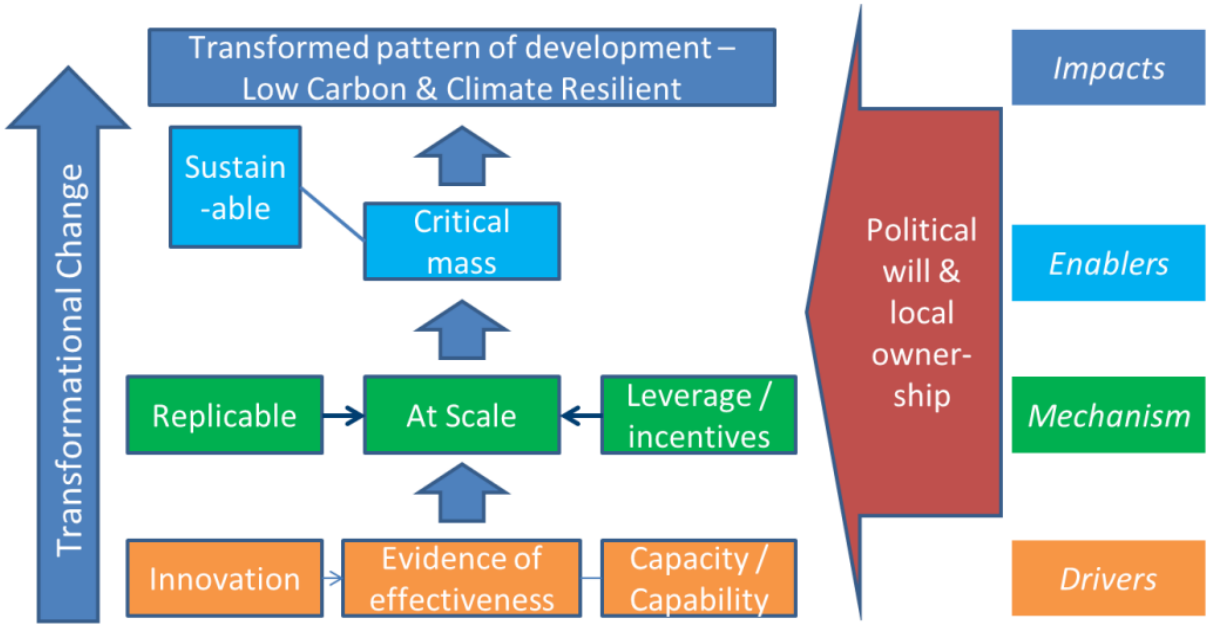
A2D Accelerate to Demonstrate Facility

Discussion Questions

- If you are currently working on an innovative project, what are you doing to facilitate a catalytic and transformational impact?
- How are you overcoming any barriers faced?

Definition:
The transformational impact (*KPI-15*) indicator tracks early signs of transformation in projects, or the extent to which key activities either are being, or have a good likelihood of being, transformational.

Theory of Change for Transformational Change:

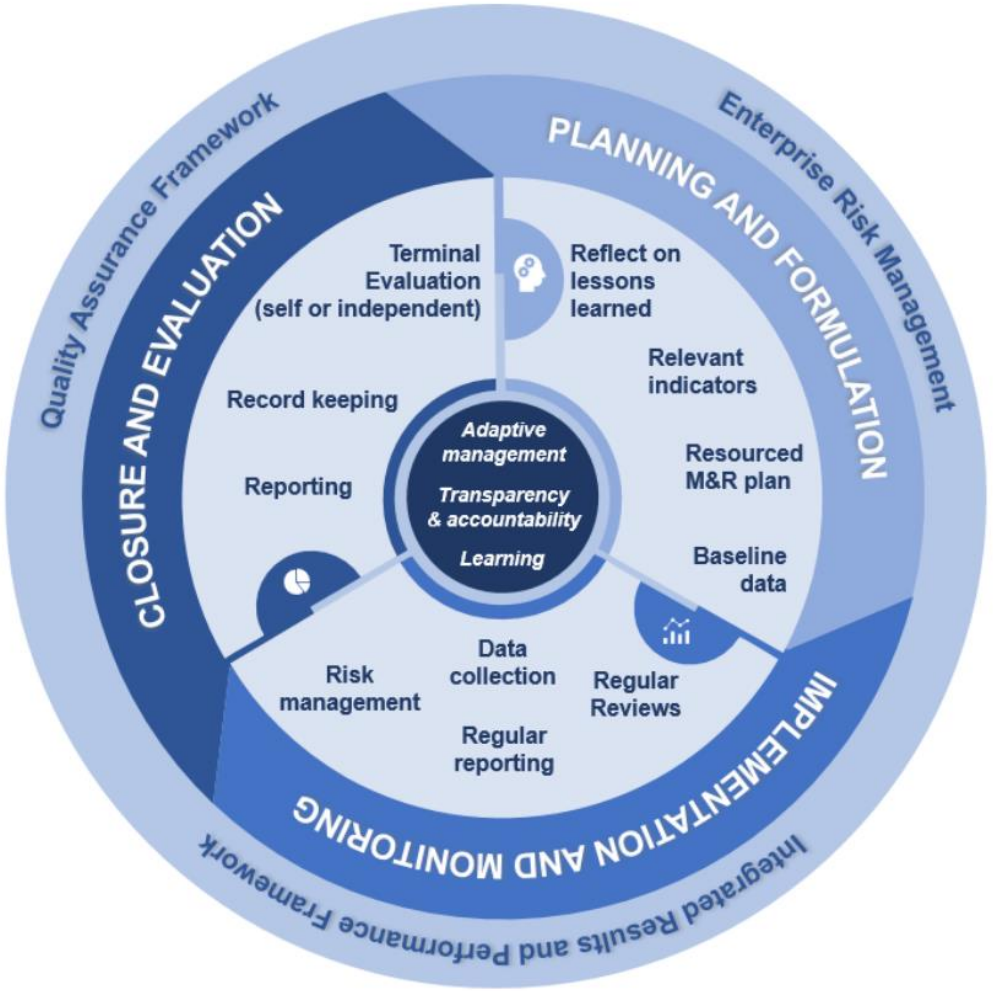


UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

A2D Accelerate to Demonstrate Facility

Monitoring

- Continuous examination of progress achieved during the implementation of a project to track compliance with the plan and to take necessary decisions to improve performance.
- UNIDO monitors all projects through a Logical Framework ("Logframe").
- Performance and payments linked to meeting agreed milestones, deliverables and results.



Reference: UNIDO (2021) "UNIDO Monitoring and Reporting Policy" (document DGB/2021/14)

A2D
Accelerate to Demonstrate Facility

Outcomes from the Market Assessments

- x3 market assessments commissioned and completed in 2024 and published at COP29: Clean Hydrogen, Critical Minerals, and Smart Energy and Industrial Decarbonization.

- Focused on the landscape of technologies, stakeholders, innovators, initiatives, existing projects and delivery mechanisms in developing countries.

A2D Facility Market Assessments: Access the reports here

UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

A2D Accelerate to Demonstrate Facility

Landscape of Innovators

Critical Minerals: A key takeaway from the assessment is that technological innovation in the mid- and downstream segments of the value chain in developing countries relies primarily on technology transfer from developed countries. With that said, homegrown technological innovation in the mid- and downstream segments of the critical minerals sector is slowly emerging in developing countries.

LAC

- Tech for extracting and refining lithium from salar brines and producing battery-grade lithium carbonate (M)
- Tech for extracting and refining lithium from clay deposits and producing battery-grade lithium carbonate (M)
- Tech for producing lithium-ion batteries using lithium carbonate (D)

AFRICA

- Modular tech for recycling lithium-ion batteries using safer chemicals and environmentally sound processes (D)

ASP

- Tech for processing nickel laterites (U/M)
  Tech for producing battery raw materials and battery-grade products (M)
- Tech for producing high-purity silicon ingot for silicon wafers, and solar cells, for solar panel manufacturing (D)
- Tech for recovering energy-critical metals (e.g. nickel hydroxide) from recycled lithium-ion batteries (D)

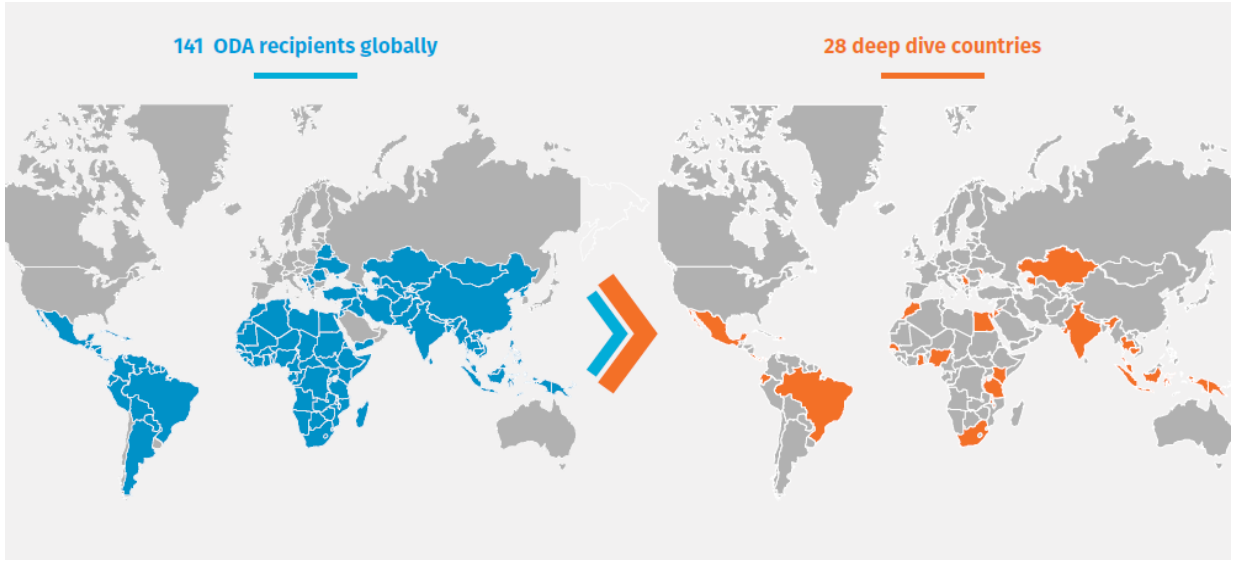
U = upstream	M = midstream	D = downstream

UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

A2D Accelerate to Demonstrate Facility

Landscape of Innovators

Clean Hydrogen: Over 200 innovators were identified in developing countries, with 69 of them in China (27.6%) and 43 of them in India (17.4%), both countries leading the way, largely due to strong governmental support. 75 of these innovators are universities (33.9%), 29 are research institutions (13.4%), 20 pure-play clean hydrogen developers (8.9%), and 16 energy companies (8.0%). Despite the presence of innovators, they are currently found in 42 of the 141 developing countries (29.7%). In regions such as Africa, where industrialization is generally still in earlier stages, clean hydrogen innovation remains limited as energy generation and electricity access take priority.



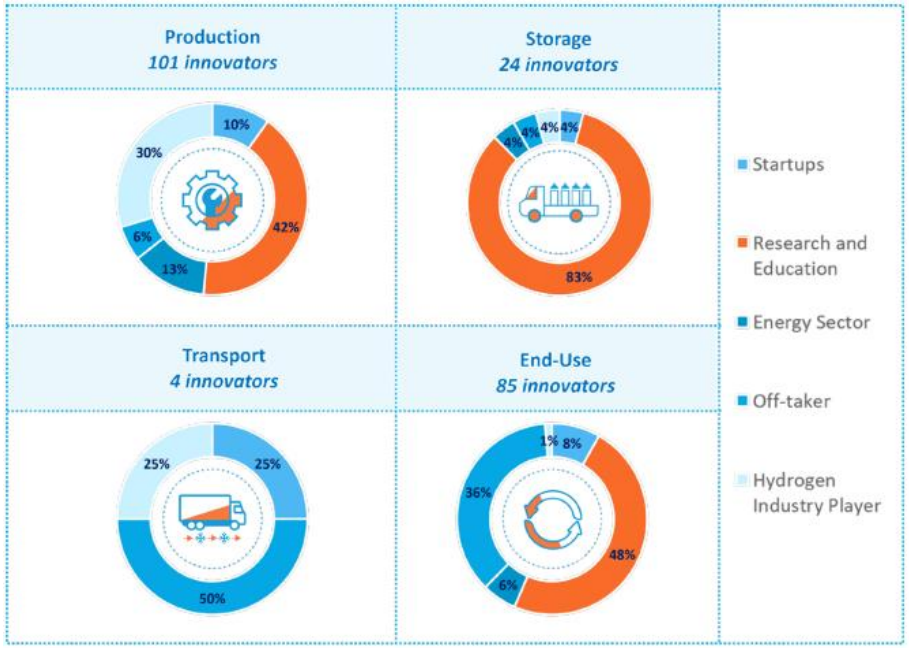


Figure 4. Number of innovators by segment of the clean hydrogen value chain.

UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

A2D Accelerate to Demonstrate Facility

Landscape of Innovators

Smart Energy and Industrial Decarbonization:

The assessment found high-potential markets to include India, Brazil, Thailand, South Africa and Mexico due to stronger enabling environments and policy frameworks, which advance the continued reduction in the costs of renewable energy technologies, making them more accessible.

Table 4-1. Categories and sub-categories of Innovators

Research and Education	Energy Sector	Hydrogen Start-ups	Hydrogen Industry Players	Off-takers
Universities	Renewable energy companies	Start-ups	Pure-play clean hydrogen developers	Oil & gas companies
Research institutions	Electric power utilities and generators		Hydrogen technology equipment or component manufacturers	Automotive and transport companies
			Industrial gas companies	Chemical and fertiliser companies
				Other companies in hydrogen end-use applications

Adoption of innovative technologies in both smart energy and industrial decarbonization fall into four main categories: 1) political and legal, 2) economic, 3) technological and environmental, and 4) social.

UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

Landscape of Technologies

Critical Minerals:

- **Midstream:** encompasses the processing and refining of critical minerals into usable forms as well as the recovery of resources from mining by-products such as process tailings, electrorefining sludge, and pyrometallurgical slag.
- **Downstream**: extends beyond the manufacturing, assembly, and distribution of final products, and also covers the recovery, repurposing, and recycling of valuable materials from secondary resources, such as end-of-life manufactured goods.

List of
Critical minerals analysed

- Lithium
- Nickel
- Manganese
- Cobalt
- Graphite
- Rare Earth Elements (REEs)
- Copper
- Platinum Group Metals (PGMs)

The technologies analysed in the assessment can be grouped into five major categories:

Physical-mechanical

- Sorting, flotation, magnetic separation, gravity separation, electrostatic, triboelectric, eddy current separation

Hydrometallurgy

- Leaching: Inorganic acids, organic acids, inorganic bases, oxidising and reducing agents, inorganic compounds, complexing agents, water, microbes
- Leach solution concentration and metal extraction

Pyrometallurgy

- Roasting, calcining, sintering, pelleting and briquetting, smelting, volatilisation (retorting), refining, segregation

Electrometallurgy

- Electrowinning, electrorefining, molten salt electrolysis, electrochemical separations

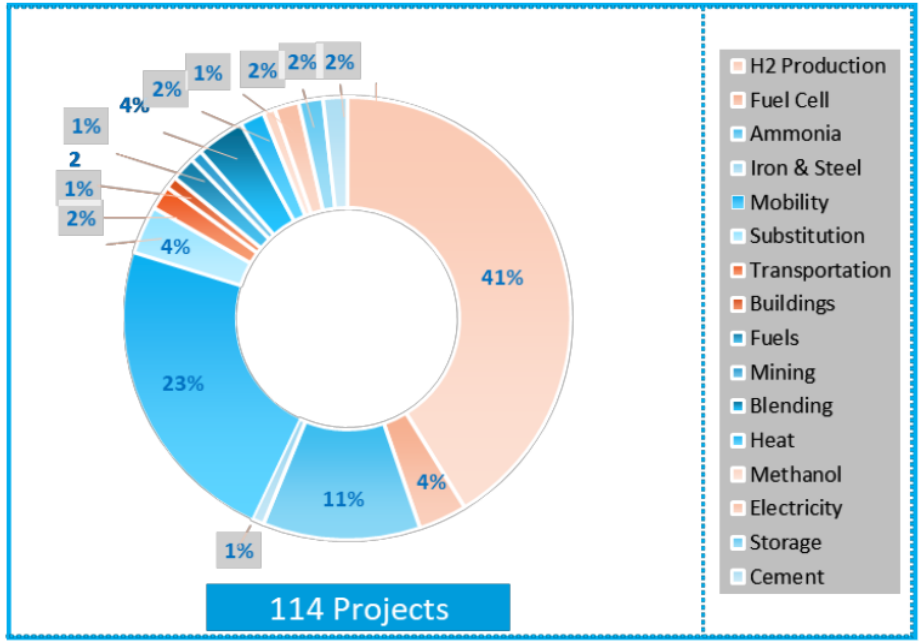
Bio-based

- Biomining (biometallurgy), bioleaching, biosorption, phytomining.

UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

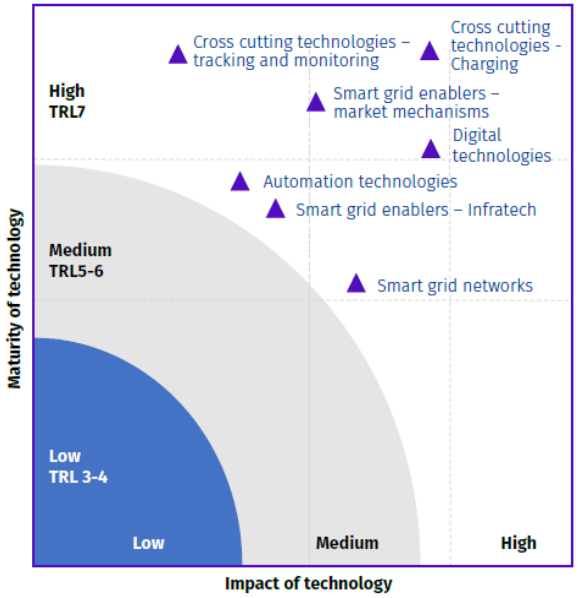
A2D Accelerate to Demonstrate Facility

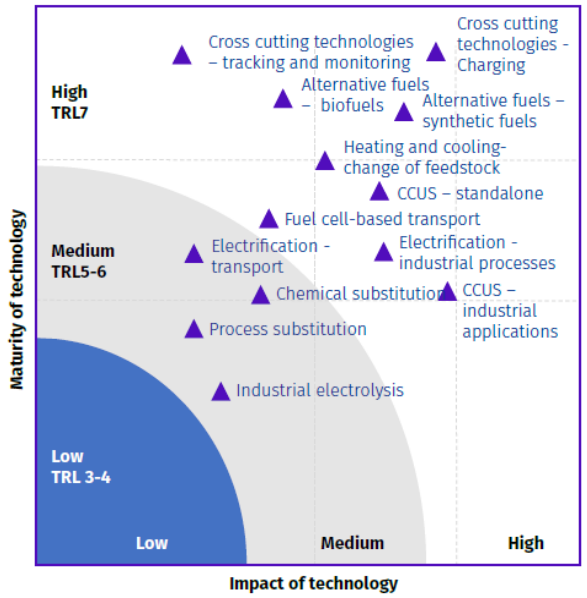
Landscape of Technologies



Clean Hydrogen: 110 hydrogen projects with technologies in TRLs 6 to 9, in late-stage planning, were mapped across over 40 developing countries. Out of this 41% of the projects focus on hydrogen production, followed by 23% on mobility. For regional context: LAC hosts 41 projects, Africa has 28 and in Asia, India and China are more dominant in this regard.

Smart Energy: Approximately 50 relevant smart energy technologies within the Technology Readiness Level (TRL) range 3 to 7 were identified and assessed. Most of these technologies are currently in the post-conception phase, with nearly 50% at the prototype or pilot testing stages.





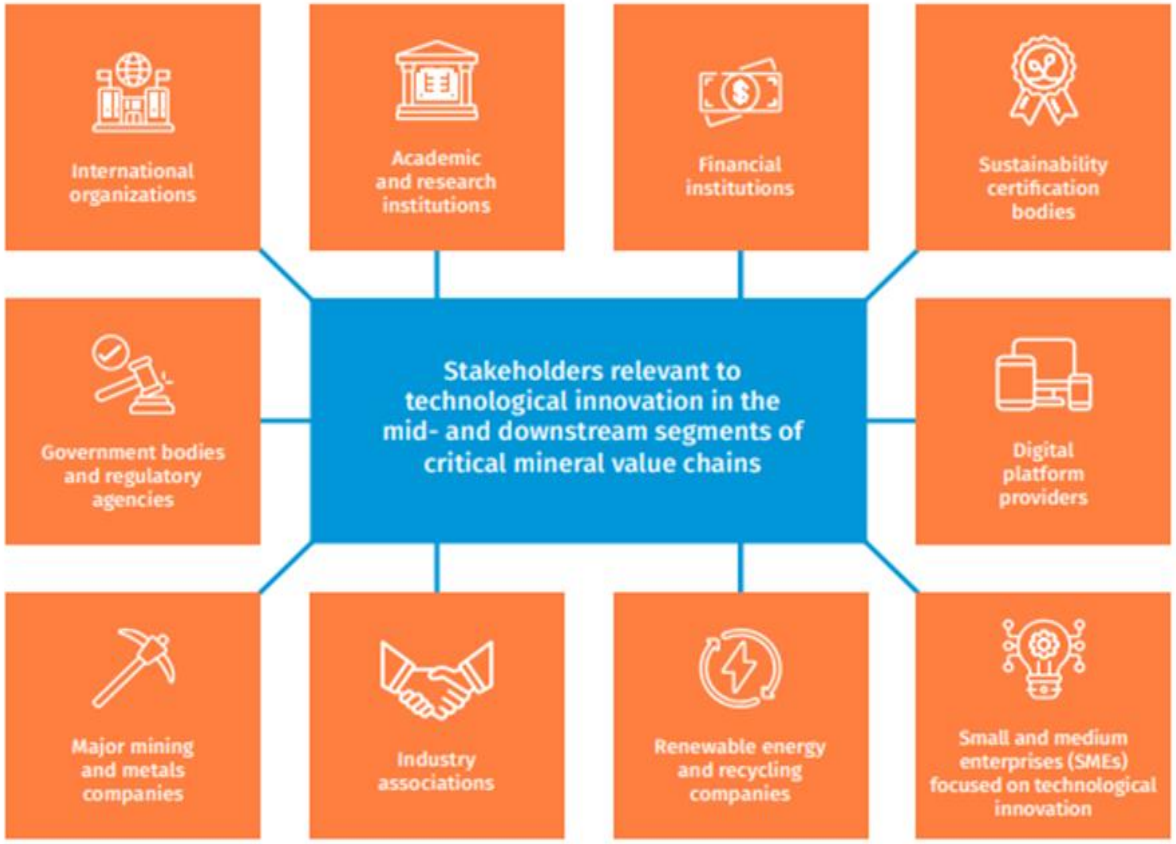
Industrial Decarbonization: In the area of industrial decarbonization approximately 200 technologies across TRLs 3-7 were identified and assessed. Most of these technologies are in the post-conception phase, with nearly 50% at the prototype or pilot testing stages.

UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

A2D Accelerate to Demonstrate Facility

Landscape of Stakeholders

Critical Minerals:



The role of industry associations is a more high-level version of the mining companies that they represent. Organizations such as ICMM (an industry association of mining companies with the objective of improving sustainable development outcomes in the mining and metals industry) influence the direction that sustainable development in mining and mineral value chains may take.

UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

A2D Accelerate to Demonstrate Facility

Landscape of Stakeholders

Smart Energy and Industrial Decarbonization:

Six critical stakeholder groups have been identified, including innovators, adopters, controllers, funders, advisors and influencers, all of whom play essential roles in advancing technology innovation in both the two thematic areas of smart energy and industrial decarbonization.

TABLE 3: Stakeholder groups

Stakeholder Groups	Innovators	Adopters	Controllers	Funders	Advisors	Influencers
Role	Develop new technologies, perform data analysis and provide technical expertise	Bring innovations to market, invest in technology development and scale up solutions	Set policies and regulatory frameworks, provide initial funding and facilitate demo projects	Provide capital for R&D and technologies deployment, and mitigate risks	Engage communities, provide on-the-ground support and share best practices	Raise awareness, facilitate collaboration and driving engagement through their platforms
TRL 3-4	High	Low	Limited	High	High	Low
TRL 5-6	High	Limited	Limited	High	High	Limited
TRL 7-8	High	High	High	High	High	High

High Limited Low

UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

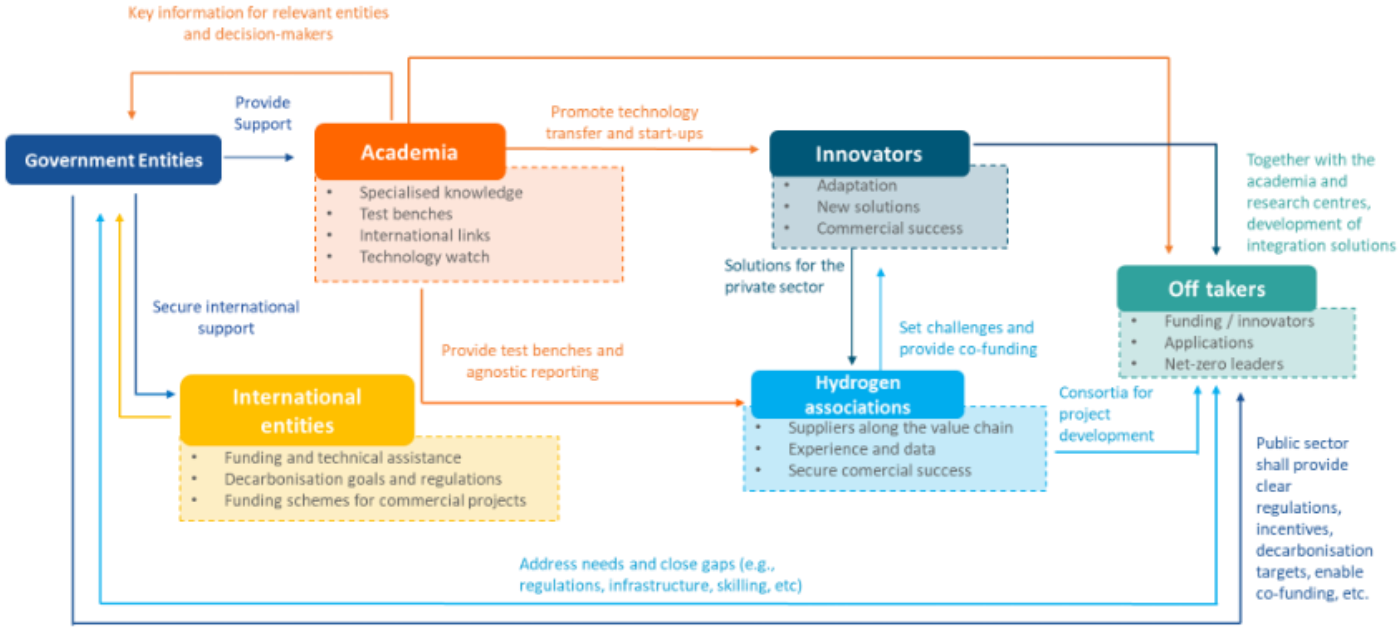
A2D Accelerate to Demonstrate Facility

Landscape of Stakeholders:

Clean Hydrogen:

Each stakeholder group contributes in different ways to the innovation process:

- **Innovators** such as think tanks, academia, research organizations, startups, and tech companies are pivotal in developing new technologies, performing data analysis, and providing technical expertise.
- **Adopters**, including end users, SMEs, large users, service companies, and the private sector, are responsible for bringing innovations to market, investing in technology development, and scaling up solutions.
- **Controllers**, such as government bodies, regulatory bodies, and certification bodies, set policies and regulatory frameworks, provide initial funding, and facilitate demonstration projects.
- **Funders**, including banks, donors, financial bodies, and investment funds, provide capital for R&D and technology deployment and mitigate risks.
- **Advisors**, such as NGOs, energy associations, industrial associations, and consultants, engage communities, provide on-the-ground support, and share best practices.
- **Influencers**, including media, social media influencers, and associations, raise awareness, facilitate collaboration, and drive engagement through their platforms.



In all thematic areas the relationship between innovators and adopters is marked by a collaborative approach. There is significant collaboration between controllers (government), adopters (private sector), and advisors (NGOs) to implement and scale up clean energy end solutions through public-private partnerships (PPPs).

UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

A2D Accelerate to Demonstrate Facility

Landscape of Initiatives

Critical Minerals:

TABLE. Landscape of initiatives (Phase 1)

Initiative	Type	Key technologies involved	Key stakeholders involved	Geographic focus
World Economic Forum's UpLink	Platform for innovators to present their solutions to global challenges	• Waste management systems • Greenhouse gas emission reduction innovations • Resource efficiency technologies	• Startups • Academic institutions • Industry	• Global
Prospect Innovation	Accelerator for technological innovation in the mining sector	• Energy generation and storage • Recycling and recovery • Robotics, mobility, and hardware • Data capture, analytics, and AI • Carbon capture • Synthetic Biology	• Research institutions • Mining companies • Venture capital firms	• Americas • ASP • Europe
Global Battery Alliance (GBA)	Public–private partnership that promotes sustainable battery value chains	• Battery recycling • Tracking methods for batteries in the value chain ("Battery Passport")	• Government • Civil society • Industry	• Africa • Asia • Europe
World Bank Group's Climate Smart Mining (CSM) Initiative	Initiative to provide guidance and technical support on decarbonisation and sustainability in mineral value chains in developing countries	• Critical minerals recycling • Reusing and repurposing EOL materials	• Government • International organizations • Local communities	• Developing countries
Activate.org	Fellowship that supports entrepreneurial scientists and engineers in developing technologies for global challenges	• Broad; supports original ideas of its fellows	• Academia • Government • Corporations • Philanthropic foundations	• United States

UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

A2D Accelerate to Demonstrate Facility

Landscape of Initiatives

Clean Hydrogen:

- **National initiatives**: Country wide and it was one of the criteria for evaluating the 141 ODA eligible countries (8 in LAC, 8 in Africa and 9 in APAC).
- **Regional initiatives**: Regional initiatives enhance knowledge exchange, shared investments, and infrastructure to accelerate clean hydrogen innovation and reduce costs. They also bring countries together to advance towards a clean hydrogen economy. Such initiatives allow developing countries that have not developed roadmaps or policies. E.g. the LAC Clean Hydrogen Action, Africa Green Hydrogen Alliance and Asia Pacific Green Hydrogen Alliance.
- **International Initiatives**: Only 37 of 141 (26.2%) of developing countries are currently involved in the international initiatives mapped. Brazil, China, India, Morocco, and South Africa are currently the main recipients of international cooperation.

Smart Energy and Industrial Decarbonization:

- **National Initiatives in Americas**: 13 identified with RELAC being the most prominent one "REnovables in Latin America and the Caribbean (RELAC)." In Africa and Europe: 32, such as “African Circular Economy Alliance (ACEA)". Asia and Oceania: 27 initiatives identified, such as “Asia-Pacific Economic Cooperation (APEC) Smart Grid Initiative“.
- **Smart Energy:** Smart grids Sustainable fuels Energy storage systems Circular economy Integrating renewable energy (RE) sources, Energy efficiency, Big Data.
- **Industrial Decarbonization:** Sustainable fuels, Circular economy, Energy efficiency, CCUS.

UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

A2D Accelerate to Demonstrate Facility

Landscape of Financial Delivery Mechanisms

TABLE. Landscape of financial delivery mechanisms (Phase 1)

Public Sources	Private Sources
• Multilateral Development Banks (MDBs)	• Venture Capital
• Multilateral Climate Finance Funds	• Corporate Venture Capital
• National Development Banks	• Private Equity
• Bilateral Development Agencies	• Accelerators and Incubators
• Government Grants and Subsidies	• Private Banks
• Sovereign Wealth Funds (SWFs)	• Impact Investment Funds

Critical minerals: The preliminary mapping categorized them according to the predominant public or private nature of their funding source, to help guide stakeholders in identifying financing opportunities and gaps and evaluating the potential roles of various financing sources and models in supporting technological innovation.

Clean hydrogen: Governments and development organizations providing concessional financing, grants and technical assistance to support the first movers in the industry. At present, funding initiatives and partnerships for R&D projects in developing countries are primarily focused on improving the cost and technical efficiency of clean hydrogen production technologies, particularly electrolysis.

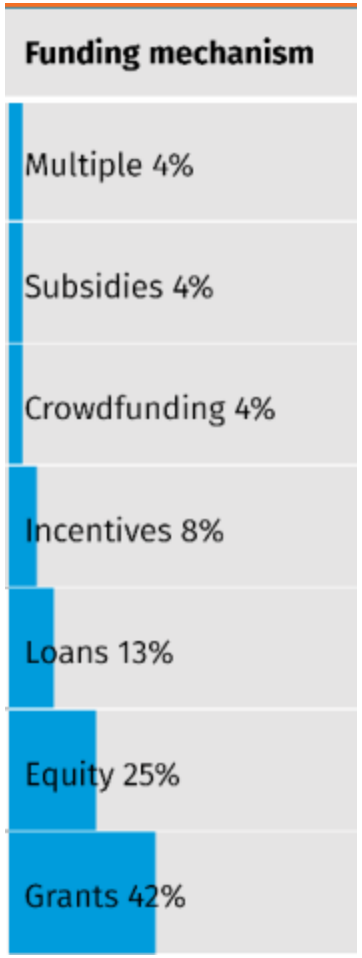
UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

A2D Accelerate to Demonstrate Facility

Landscape of Financial Delivery Mechanisms

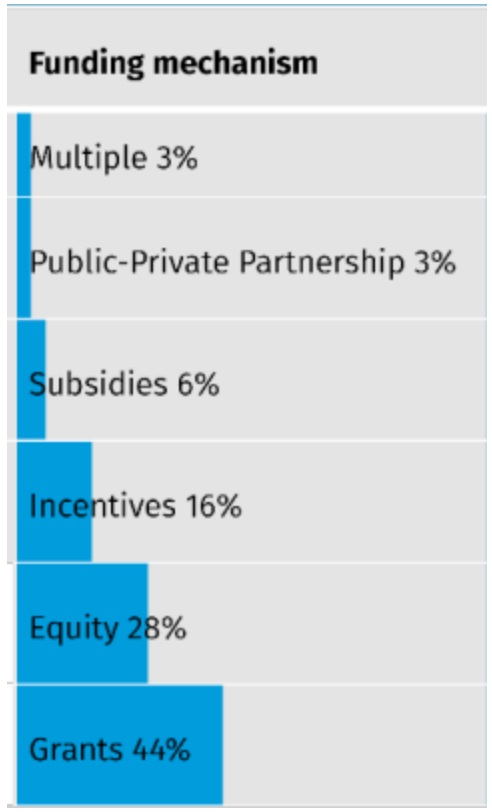
Smart energy:

The majority of smart energy projects are buoyed by government grants, as governments aim to foster projects that will catalyze further interest and investment from various stakeholders.



Industrial decarbonization:

These projects are principally supported by government or multilateral grants that help bridge the financial gaps associated with these advanced technologies.



UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

A2D

Market Assessment Findings: Brazil

UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

A2D Accelerate to Demonstrate Facility

Critical Minerals – Country Landscape

BRAZIL

★ ★ ★
RATING: **HIGH**

Overall Policy Environment: Brazil has a comprehensive legal and regulatory framework for mining value chains, backed by a robust institutional framework that enforces stringent environmental standards across mineral value chains, including processing plants. Mining policies focus on sustainable development, competitiveness, and the integration of mineral production with energy transition technologies, reflecting the government's commitment to prioritising strategic critical mineral production.

Policies on Technological Innovation: Brazil's policy framework strongly supports technological innovation within the mid- and downstream segments of critical minerals value chains. Policies facilitate unrestricted foreign trade of lithium, enhancing Brazil's global market competitiveness. A policy to support environmental permitting mandates states to ensure the timely completion of priority projects. In the national interest, the policy even allows for bypassing certain regulatory processes. The government fosters a circular economy by providing incentives for recycling technologies and mandating reverse logistics systems for e-waste.

Policies on Financial Mechanisms: Brazil offers significant financial incentives to support an innovative environment in critical minerals value chains. General tax incentives for R&D and infrastructure investment are available through governmental funds and programs. Substantial tax incentives promote investment in advanced mineral processing technologies. Tax rebates are available for the export of technologically advanced goods derived from critical minerals to promote cutting-edge technologies. Governmental funds and programs are set, with additional tax benefits and subsidies, promoting investment in the local production of EV batteries and components and recycling technologies.

Clean Hydrogen – Country Landscape

Region: LAC | **Population:** 215.3 M | **Electricity mix:** 89.1% renewables

Clean Hydrogen Landscape: Having recently launched its National Hydrogen Program, several projects have been announced, mostly in the northern region of Brazil. Brazil benefits from an 89.1% of renewables energy mix, a significant port infrastructure with access to Europe, extensive oil and gas expertise, ample land resources and is focusing on the creation of educational centres, ensuring a skilled workforce.

KEY FINDINGS

- **Competitive advantages:** High potential for renewable electricity, supported by regulatory incentives, technical standards, and certification. Strong prospects for transforming industrial hubs into hydrogen hubs, with robust export infrastructure, local expertise, and an R&D mandate requiring 1% of total revenue from electricity companies for research.
- **Barriers:** Uncertainty in off-take agreements, project suspensions, and risk in project financing.
- **Strategies:** Financial incentives, mandatory R&D, and production aggregation in hydrogen hubs.
- **Financing mechanisms:** Private investment is driving hydrogen export facilities at the Pecém Complex in Ceará and Port do Açu in Rio de Janeiro. The Port of Rotterdam has invested over $80 million, while the World Bank has provided $90 million.
- **SDGs:** The development of clean hydrogen value chain in Pecém will boost local economic growth in the state of Ceará, supporting poverty alleviation efforts of the government. The sector is projected to generate $15-$20 billion in revenues by 2040, boosting economic growth.

Smart Energy – Country Landscape

A2D Accelerate to Demonstrate Facility

Brazil has undertaken significant initiatives for smart energy integration but faces challenges due to its policy, infrastructure and financial environment

Brazil

Policy

- Although there have been some advances in the Brazilian regulatory structure, many gaps still stand as a barrier to the development of smart grids in the country

Incentives

- White Hourly Tariff (WHT) offers reduced off peak rates and penalties for higher peak hour tariffs. A wider smart meter adoption is important for the success of this tariff structure

Infrastructure

- The deployment of storage technologies is at a slow pace as well as the country's vast size especially remote areas such as the Amazon make it difficult to deploy smart grids

Financing

- High investment costs with limited customer awareness creates an uncertain environment for the utility companies as they need to make the initial investments in the smart meters

Key Policies and Regulations

Smart grid regulation	• It sets standards for smart meter equipment and operational processes making Brazil's grid more efficient and technologically advanced.
Energy compensation system for micro and mini generation	• It aims to enhance the integration and efficiency of distributed energy resources in the national grid.

Key Initiatives and collaborations

Smart grid regulatory roadmap technical assistance project	• The project led by ABRADEE(Brazilian Association of Electricity Distributors) and funded by USTDA(U.S. Trade and Development Agency) aims to analyze the regulatory scenarios to support the implementation of smart grid technologies.
Smart meter integration program	• Copel, a utility company in the Paraná state is advancing its smart meter roll out to modernize the utility infrastructure and enhance service efficiency.

Key takeaways

Future development of smart energy technologies in Brazil hinges on enabling policies, substantial infrastructure funding and the seamless integration of renewable energy sources.

UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

Industrial Decarbonization – Country Landscape

A2D Accelerate to Demonstrate Facility

Brazil is showing strong commitment to achieve industrial decarbonization with promulgation of various policies, incentives and relatively robust infrastructure

Brazil

Policy

- The policy framework includes a focus on achieving emission reduction targets with renewable energy expansion and industrial transformation

Incentives

- MOVER(Green Mobility and Innovation Program) offers fiscal credits companies investing in sustainable technologies

Infrastructure

- Brazil is a leader in hydropower and biofuels and is now focussing on expanding to other low emission technologies. It has connected numerous small-scale hydropower projects to the grid

Financing

- High level of investments required to reach its 2030 GHG reduction goals ,thus it is focusing on international collaborations for decarbonization

Key Policies and Regulations

RenovaBio (Brazil's Biofuel Policy)	• Reduction of carbon emissions by increasing the production and use of biofuels. It focusses on promoting sustainable development through carbon credits for the biofuel producers based on their environmental performance.
National Energy Plan 2050	• Expansion of renewable energy sources, particularly solar and wind to achieve a decarbonized energy sector.
National Policy on Solid Waste	• Establishes guidelines for managing solid waste, promote recycling and environmentally sound disposal practices. It mandates a shared responsibility for life cycle of products ,including specific provisions for managing hazardous wastes.

Key Initiatives and collaborations

Industrial Deep Decarbonization Initiative (IDDI)	• This initiative focuses on transforming heavy-emitting sectors through technological innovation, capacity building, and policy development. This initiative, in collaboration with the UK, aims to promote the use of low-carbon technologies and materials in industries like steel and cement, targeting net-zero carbon emissions by 2050.
Industrial Decarbonization Hub	• Launched by UNIDO and the UK, it supports the country's path to net zero emissions by promoting innovation and collaboration in industrial sectors.. It connects local industries with international partners to drive decarbonization projects through research, policy development and final resources.
National Green Growth Program	• It aims to decarbonize the economy through green investments, sustainable energy initiatives and nature conservation efforts. It is designed to align economic growth with environmental reservation, supporting Brazil's climate commitments.

Key takeaways

Brazil's decarbonization journey is marked by promising international collaborations and innovative solutions, paving the way for a sustainable future

Source: 1. Clean energy innovation in Brazil; 2. Industrial decarbonization Hub; 3. Industrial Deep Decarbonization Initiative; 4. National green growth program

Gender Equality, Social Inclusion and Environmental Safeguards

UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

A2D Accelerate to Demonstrate Facility

Gender Equality and Social Inclusion (GESI)

- **Gender Equality:** Gender equality means **equal rights, responsibilities, and opportunities** for everyone, **regardless of gender**. It values the needs and priorities of all genders equally, aiming to eliminate barriers that uphold unequal power relations.
- **Social Inclusion:** Social inclusion involves **removing barriers** that prevent marginalized groups—based on gender, ethnicity, age, disability, or other factors – from full participation in society. It ensures these groups are not left behind, particularly in economic, social, and political spheres, by **promoting equal access to resources and decision-making**.

Foundations – GESI

- ✓ Do No Harm (DNH)
- ✓ Empowerment
- ✓ Just transition
- ✓ Leave no one behind principle

1. Do No Harm

- A principle recognizing that **no action is neutral**.
- Applies a **"Do No Harm" approach** to ensure projects create **safe, equitable working conditions**.
- Focus on **empowering women** in leadership roles within clean energy transitions.
- Improves outcomes for **vulnerable groups** and supports a **fair, inclusive, and sustainable** shift to a low-carbon future.

2. Empowerment

- Building **assets and capabilities** so individuals and groups can **participate and engage**.
- Enables them to **influence decisions** and **hold institutions accountable**.
- Happens at both **individual and group level**.
- Strengthens **agency** and **collective power** for action and change.

3. Just and Equitable Transition

- A fair shift to low-carbon economies **must benefit all,** especially the most vulnerable. **Marginalized groups** (e.g. women, Indigenous peoples, low-income communities) face greater energy poverty and climate risks. These groups must be **prioritized and included** to ensure access to clean energy and avoid being left behind.
- **Women's insights** into household and community energy needs are essential, their **leadership and participation** improve energy system design and fairness.

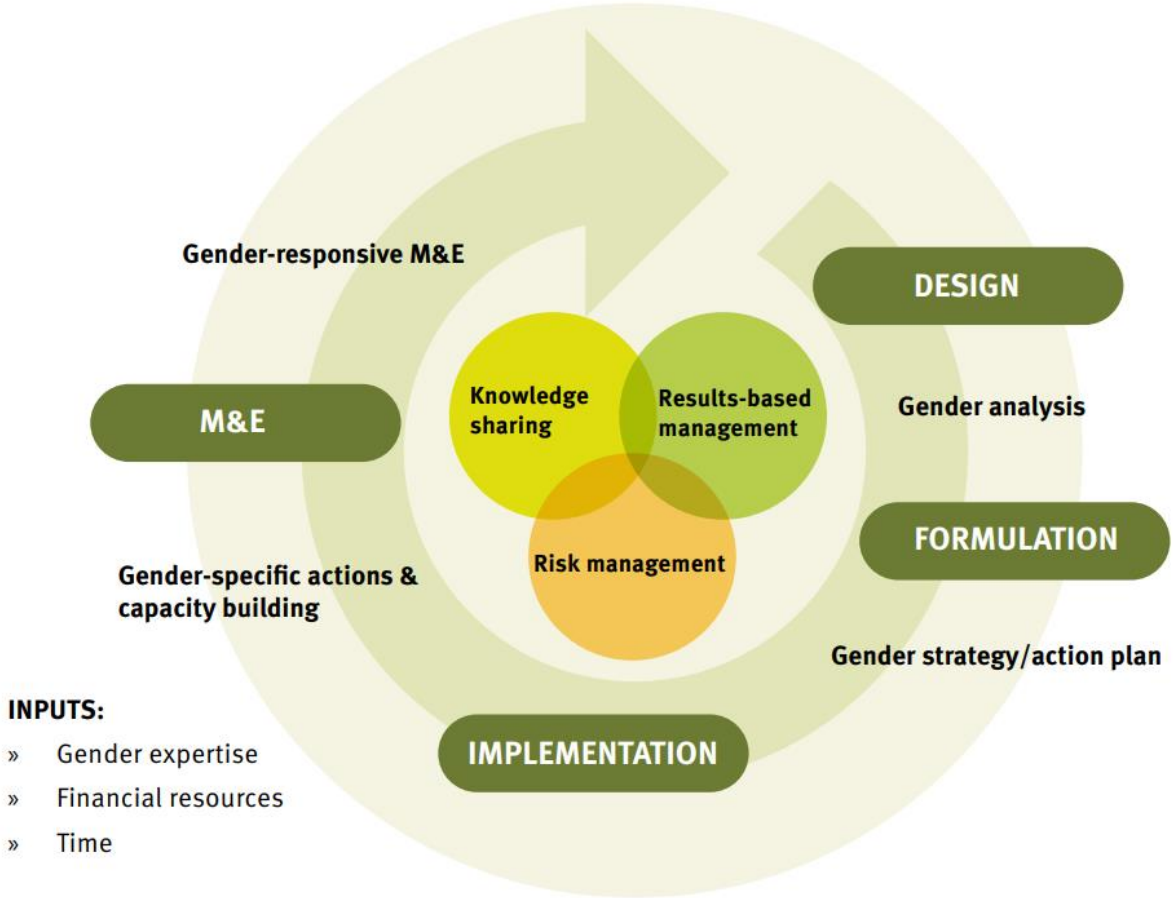
Mainstreaming gender issues at different stages of the project cycle

[UNIDO Guide to Gender Analysis and Gender Mainstreaming the Project Cycle]

Find Tool Step by Step [here]

1. **Project Formulation** – Identify gender and inclusion gaps and design gender- and-social responsive activities
2. **Project Implementation** – Ensure equal participation and benefits for everyone
3. **Monitoring & Evaluation** – Track gender and social impacts and adjust strategies as needed



UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

GESI action plan at the project level

Ensuring that action plans include:

1. **Gender Analysis:** Identifying gender disparities and specific needs within the project context.

2. **Action Plan:** Defining clear activities and timelines to address gender equality and social inclusion goals.

3. **Monitoring & Evaluation:** Setting indicators to measure progress and assessing the impact of GESI interventions.

GESI Action Plan Outline

- **Introduction:** GESI Background, Purpose-Objectives
- Project Background: entry points for gender-mainstreaming
- **Policy, Legal Administrative Framework:** compliance with national and international legal framework and standards, international best practices
- **GESI Tools and Procedures:** screening of projects, action steps , Capacity development planning.
- Communication and Stakeholder Engagement Plan
- GESI Draft Implementation Action Plan and M&E Plan

UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

Considerations for a GESI Analysis

01 GESI ANALYSIS

A gender analysis should investigate the following questions:

- What are the key gender and social issues in the sector/region?
- How might the project affect women and men differently?
- How are other marginalized communities impacted"?

02 Understanding the Political/Country Context

03 Considering of the needs, rights, capabilities and priorities

05 Gender - Age disaggregation data

04 Ensuring participation of diverse social groups in decision-making

UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

A2D Accelerate to Demonstrate Facility

Why GESI matters?

- It reduces inequalities
- It improves economic growth
- It makes communities stronger

When everyone has a fair chance to succeed, societies become more sustainable and resilient.

UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

A2D Accelerate to Demonstrate Facility

GESI: Monitoring and Reporting

A2D Facility: gender output indicator focused on compliance with **OECD-DAC gender equality policy marker** **score 1** throughout the project cycle.

Code	Value	Explanation	Minimum Criteria (should be met in full)
2A	Significant expected contribution to gender equality	Gender issues are not the main objective of the project or programme but are significantly reflected and integrated (mainstreamed) in all relevant dimensions: results, activities, M&E framework.	There is at least one explicit gender equality related output backed by at least one gender-specific indicator. A gender analysis of the project has been conducted and the findings inform project design. Data and indicators are disaggregated by gender, where applicable. The M&E component of the project is designed to report on the expected gender equality results. The logframe/results framework measures progress towards the project's gender-related output(s) through gender-specific indicators to track outcomes/impact.
3.3	A2D Project Monitoring Tool: Output Indicator 3.3	Demonstration project meets the criteria in the OECD DAC Gender Marker	A positive impact on advancing gender equality and/or the empowerment of women and girls, reducing gender discrimination or inequalities, or meeting gender-specific needs (OECD marker 1)

UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

A2D Accelerate to Demonstrate Facility

Key Points on GESI in Projects

- GESI Mainstreaming makes projects **more inclusive, effective, and impactful.** UNIDO provides **tools and guidance** to help project developers integrate gender and social inclusion considerations.
- **Apply gender and inclusion lens** at **all project phases.**
- Monitoring and Reporting: Ensure **gender-disaggregated data collection.**
- Partner with **gender-social focused organizations** to enhance impact.

UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

A2D Accelerate to Demonstrate Facility

Environmental and Social Safeguards (ESS)

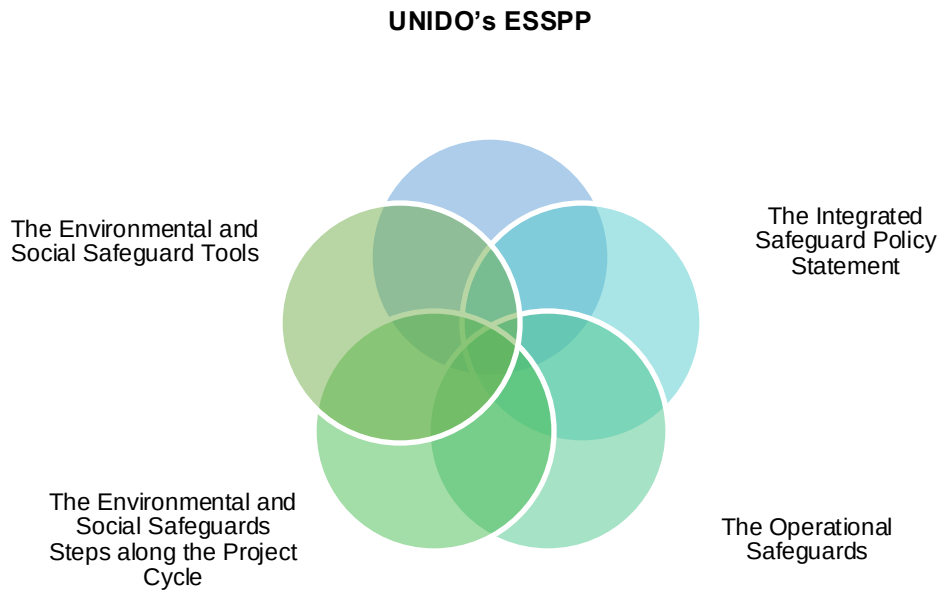
UNIDO Environmental and Social Safeguards Policies and Procedures (ESSPP)

- Defines **UNIDO's commitment** to responsible project implementation.
- Ensures **compliance with International Laws and Best Practices**.
- Provides **guidelines for assessing environmental and social risks**.
- Ensures projects contribute to **Inclusive and Sustainable Development (ISID).**

UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

A2D Accelerate to Demonstrate Facility

UNIDO ESSPP



UNIDO's Operational Safeguards

UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

A2D Accelerate to Demonstrate Facility

Example of ESSPP Application in UNIDO Projects

PROCACAO II: helps cocoa producers and cooperatives comply with quality standards and implement good agricultural practice to increase their productivity by promoting the cultivation of cocoa under agroforestry systems in Nicaragua.

Potential ESS risks

Proximity to protected areas | Soil degradation and erosion | Contamination from wastewater | Occupational health and safety | Child labor on family farms | Indiscriminate crop expansion

ESS measures undertaken to maximize the overall positive impact of the project

Two national experts were hired to develop an E&S study (ESMP) and a validation process was undertaken with the project team and the ESS Unit.

Measures outlined in the ESMP were included in the budget and work plan, and implemented in collaboration with national counterparts and stakeholders.

Mitigation strategies included:

- Capacity-building for the project team, cooperatives and producers on agroforestry, biodiversity conservation and agrochemical use
- Handout of personal protective equipment
- Production of an easy-to-use checklist for farmers on conservation

Lessons learned were incorporated into the design of the project's next phase - NICACAO.

ESS-related lessons learned during ESMP development and implementation

Continued engagement with ESS experts facilitated the implementation of effective mitigation measures and capacitation of project counterparts and beneficiaries.

The ESMP validation process and additional stakeholder engagement addressed key ESS risks using available project resources and enhanced the project team's understanding and ownership of the document.

This process generated further insights on site selection, climate change impacts, legal protection, communication strategies and resource allocation.

ESS measures do not need to be costly, many measures can be easily implemented within the existing action zone of the project

UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

A2D Accelerate to Demonstrate Facility

Potential Risks related to Demonstration Projects

Sector	Risk	Description
Critical Minerals	Biodiversity Loss & Land Degradation	Loss of vegetation and land degradation from midstream and downstream processing.
	Soil Contamination	Industrial discharge affecting soil fertility and agricultural productivity.
	Climate Change Impact	High GHG emissions from processing and transportation.
	Waste Management Issues	Improper disposal of industrial waste leading to contamination.
	Labor Conditions	Poor working conditions and unsafe practices.
	Community Displacement	Disruptions due to facility development.
Clean Hydrogen	Water Scarcity	High water demand for electrolysis processes.
	Land Acquisition Issues	Conflicts over land use due to facility development.
Smart Energy	Cybersecurity & Privacy Risks	Cybersecurity vulnerabilities in smart grids.
	Land Use Conflicts	Infrastructure projects impacting local communities.
Industrial Decarbonization	Job Displacement	Increased automation reducing traditional labor needs.
	CCUS Site Leakage	Potential CO2 leakage affecting groundwater quality.

UNITED NATIONS
INDUSTRIAL DEVELOPMENT ORGANIZATION

A2D Accelerate to Demonstrate Facility

ESS Steps required along the Project Cycle

1. **Screening of projects for Potential E&S risks**

   - Policies, standards and operational procedures that seek to **prevent and mitigate unintended harm** to People and Environment
   - Identify and manage **E&S risks**, maximizing **positive outcomes and co-benefits** for ecosystems and local communities.
   - Going beyond a **"do no harm"** approach, including key **human rights-based** approach which prioritizes the protection of both the environment and the well-being of communities

2. **Preparing E&S Assessments** depending on Categorization received.
   - Either Environmental and Social Impact Assessment (ESIA), Environmental and Social Management Plan (ESMP), or Environmental and Social Management Framework (ESMF) to be submitted **after project implementation starts**.

3. **Monitoring, Reporting and Evaluation on E&S issues** throughout the project cycle.
   - Ensuring ESS management commitments and the materialization of E&S risks reflected upon in: Quarterly reporting, Annual Reporting, Mid-Term Evaluation.
   1. Compliance Verification System

Screening of projects with a **"Screening Template"'**

→ **Category A:** likely to induce significant/irreversible adverse E&S impacts. Projects are required to prepare an ESIA and an ESMP or ESMF

→ **Category B:** less adverse effects and reversible. Projects do not require an ESIA but an ESMP or ESMF needs to be developed.

→ **Category C:** minimal or no adverse effects .Projects usually require no further assessments. Additional requirements may, however, still apply.

→ **Category NO PROJECT:** non-compliant with OS2-8

ESS Monitoring and Reporting

All supported projects report against an ESS output indicator in the project's Logframe, which complies with **UNIDO'S Environmental and Social Safeguards Policies and Procedures** throughout the project cycle

Code	Value	Explanation	Minimum Criteria (should be met in full)
3.4	A2D Project Monitoring Tool: Output Indicator 3.4	Demonstration project aligns with UNIDO's ESSPP and its Operational Safeguards (9) meeting as well criteria outline in GEF-GCF ESS Indicators	A positive impact on environmental sustainability and social inclusion, including the protection of biodiversity, sustainable land and water management, climate change mitigation and pollution reduction: **Programmatic OS** OS 1: Environmental and Social Assessment OS2: Protection of Natural Habitats OS3: Involuntary Resettlement OS4: Indigenous People OS5: Pest Management 0S6: Physical Cultural Resources OS7: Safety of Dams **Framework Operational Safeguards** OS8: Information Disclosure OS9: Accountability and Grievance Systems The project ensures equitable benefits, particularly for marginalized groups such as women and indigenous peoples and local communities (ILPs), and adheres to the criteria outlined in both UNIDO's Operational Safeguards in addition to GCF and GEF's Environmental and Social Indicators (particularly on social inclusion 68th GEF Council Meeting)
